

A Information available to one feedforward weight update

Signals may arrive from the same layer, but no error arrives from a later layer.

B The temporal distinction between the variants

	temporal reference	gradient through time	execution consequence
canonical TeReL	$p_t = z_{t-1}$ in the chunk	retained across adjacent samples	short chunk graph must be retained
TeReL-S	$p_t = \text{sg}(z_{t-1})$	stopped at the stored reference	fixed temporal state; no time graph
